

## Test.java

```
class Test
{
    public static void main(String [ ] args)
    {
        System.out.println("Hello User");
    }
}
```

Compile

javac Test.java ↴

Run

java Test ↴

Where To Save This Code ?

Insidejdk's  
bin folder

At any location  
outside "bin"

## Where to save a Java program

=====

We have two options for saving our Java code

1. Inside Jdk's bin folder.
2. At any location other than jdk's bin folder

The 1st approach is not at all recommended because the **bin folder** of jdk contains many predefined files supply by Java and are very imp't for Java itself . So we should not save our codes in bin folder.

The 2nd approach is recommended and preferred approach and every professional Java developer follows this because the bin folder remains secure. The only point to remember while using 2nd approach is that we will have to set **Java's path** before compiling and running the program.
