Images in Bootstrap :

- In bootstrap, we can change the default appearance of images by applying different classes like rounded corners, circle, thumbnail and fluid based on our requirements.
  - **.rounded** : adds *border-radius:6px* to give the **image** rounded corners.
  - **.rounded-circle:** makes the **entire image round** by adding *border-radius:500px*.
  - **.img-thumbnail:** adds a **bit of padding** and a **gray border**
  - **.img-fluid** : by adding **.img-fluid** class to the **<img>** tag we can **create** a **responsive image**. The .img-fluid class will apply **max-width: 100%** and **height: auto** to the **image** so that it will **scale** with the **parent element.**

```html
<div class="container mt-3 bg-black text-white">
    <div class="row">
        <div class="col-sm-3">
            <h5>Image Rounded</h5>
            <br>
            <img src="images/flower.jpg" class="rounded">
        </div>
        <div class="col-sm-3">
            <h5>Image Rounded Circle</h5>
            <br>
            <img src="images/flower.jpg" class="rounded-circle">
        </div>
        <div class="col-sm-3">
            <h5>Image Thumbnail</h5>
            <br>
            <img src="images/flower.jpg" class="img-thumbnail">
        </div>
        <div class="col-sm-3">
            <h5>Image Fluid</h5>
            <br>
            <img src="images/flower.jpg" class="img-fluid">
        </div>
    </div>
</div>
```

Output :
